

Specification Sheet

Wall Shelving

Wall Shelving is shelves made simple – two sticks, four wall brackets, shelves and wedges. Based on the same principle as our Shelving System, the Wall Shelving is component based and flexible.

The shelves are held in place by the use of wedges. A key design principle giving the user full freedom to place the shelves at any given position. And rearrange the shelves as preferred. Hang them on the wall, or place them on the floor leaning against the wall.

The Wall Shelving comes in predefined sets as well as separate parts. We have designed 20 sets that will fit into most settings and rooms in your home. Naturally, you can always configure your own system or combine different sets, building as tall and wide as you like. Or combine different sets. The choice is yours.

Dimensions

Can be configured to fit into any setting

Legs: 650 mm, 850 mm, 1150 mm

Shelf: W 850 mm x D 175 mm

Weight capacity per shelf

10 kg
